

BOSCH COVERS ALL ANGLES AT RAILTEX 2011

May 2011

(Railtex 2011 – Stand F02)

Bosch Security Systems will demonstrate its expertise by presenting a broad range of proven communications, surveillance and recording technologies at Railtex 2011 – technologies that are already proven in a variety of demanding installations including St Pancras International.

The leading fire and security systems provider will showcase a range of products, systems and innovations that are each ideally suited to the specific needs of the rail industry, including its Praesideo Public Address/Voice Alarm (PA/VA) technology and a selection of digital CCTV cameras and FlexiDome systems incorporating its high definition Dinion range.

Paul Wong, Managing Director of Bosch Security Systems, says that Bosch is committed to developing security and safety solutions that are tailored to meet the demands of many different industries, including rail transport: “Bosch has worked successfully alongside a number of rail transport providers and is fully aware of the importance of having modern, reliable technology in place to protect passengers, staff and equipment in rail environments.”

Bosch’s Praesideo is the world’s first fully digital (PA/VA) system, tested and approved to the new European Standard (EN54). With over 5,000 systems installed worldwide, it is the proven solution for essential public address and emergency voice evacuation needs: “The quality and reliability of Praesideo has set the benchmark for the evacuation market from the time that it was introduced, and it is easy

to see how beneficial it could prove in a rail application,” Paul says.

The Dinion series is a range of high definition cameras that deliver exceptional clarity in surveillance. The range features both analogue and digital IP technologies, and both fixed-body cameras and FlexiDome systems, and is compatible with all existing CCTV systems. According to Paul: “The Dinion technology offers superior performance to match your application and budget.”
