

## **Bosch announces 700 Series HD recorders offering out-of-the-box HD CCTV solution**

November 2011

- ▶ Real-time HD and SD video recording with up to eight TByte of internal storage
- ▶ 32 channels for IP and analog cameras
- ▶ Automated IP device discovery, assignment and management

Bosch Security Systems introduces a fast, simple, out-of-the-box solution for HD and SD video recording and management. Easy to set up and maintain, the 700 Series HD recorders can handle the most challenging CCTV applications without excessive demands on installers or operators.

These adaptable recorders, suitable for any application requiring very high quality image performance, are equipped with up to four front-replaceable hard drives with optional RAID-4 protection, and extensive integration features.

The supplied Bosch Video Client software (BVC), which supports 700 Series HD recorders free of charge, makes operation as simple as possible. An intuitive interface with clear, menu-driven options is quick to learn and easy to use. BVC's capabilities include remote display of live and recorded video in both 1080p and 720p HD resolutions, as well as SD and analog 4CIF/D1 resolutions.

The new 700 Series HD recorders meet the growing trend towards digital and HD surveillance systems. The network recorders make the perfect match for pure IP environments. With a fully automated, onboard IP camera management system, each unit supports a total of 32 H.264 cameras. Alternatively, the hybrid models provide the ideal, future-proof choice for growing applications which use a mix of analogue and IP cameras. They support up to eight or 16 analogue cameras and an additional eight or 16 IP channels.

Getting the most out of CCTV images, 700 Series recorders capture all the details while keeping storage requirements to a minimum. The optimised H.264 compression technology from Bosch reduces bandwidth and storage needs by some 30 percent compared to traditional MPEG-4 systems.

Storage can be extended easily up to eight TByte using in-field updates, while an optional external storage array can be attached in a matter of seconds.

700 Series recorders suit a very wide range of applications and are ideal for medium- to large-scale systems. Examples include shopping centers, car parks, banks and financial institutions, city centers and crowd surveillance, and casinos and hotel complexes.
