

Bosch's Extreme Series Delivers Uncompromising Surveillance in the Channel Tunnel

April 2009

At 50km long, with 38km running underneath the English Channel, the Channel Tunnel is the longest underwater tunnel in the world and is hailed by international civil engineering experts in the US and Europe as “the greatest infrastructure success of the 20th Century”.

Eurotunnel owns the concession to operate it until 2086 and to date over 212 million passengers and 196 million tonnes of cargo have passed through the tunnel since the commercial opening in spring 1994.

So it was with a certain degree of pride that Extreme CCTV and Bosch Security Systems learned from Eurotunnel officials that its Extreme Series EX82 cameras had delivered over five years of uninterrupted video surveillance from inside the Channel Tunnel itself.

Extreme CCTV, which specialises in equipment for challenging surveillance environments, was acquired by Bosch Security Systems in March 2008, allowing Bosch to expand its already extensive CCTV product portfolio to satisfy and even wider range of applications and customer needs.

By any standards, the Channel Tunnel is an “extreme” environment due to its low light conditions, high pressure air flows, humidity and ambient salinity, but the EX82 camera took all that in its stride.

“Extreme Series cameras have provided Eurotunnel with uninterrupted underground surveillance for over five years now. Due to the location of the cameras, it is important to us that this equipment is low maintenance and is both rugged and reliable,” says Richard Howkins, Eurotunnel’s Maintenance & Signalling Department, Team Leader.

Extreme’s Product Marketing Manager, Ian Crosby says, “The camera has done a fantastic job to last five years without incident in such a difficult environment. This is a testament to our build quality and design.” Ian also points to the product

advances made possible by the Bosch acquisition, “the recently released IP version of the EX82 integrates all the advanced environmental and low light performance benefits of the EX82 camera with a Bosch IP encoder, providing full compatibility with all Bosch products” he says.

Extreme Series cameras are field proven to capture images in the most challenging conditions including; extreme temperature ranges, low-light and no-light environments, corrosive or volatile atmospheres and vandal prone areas. The EX82 cameras are playing a critical role in a system that has safely delivered more than 212 million people and 196 million tonnes of goods through the Eurotunnel since its opening in May 1994, an average of more than 26,000 customers and 50,000 tonnes of goods transported by 300 trains every day.

END

The acquisition of the Extreme CCTV Group which includes Derwent and Forward Vision CCTV by Bosch Security Systems allows Bosch to expand its already extensive CCTV portfolio to satisfy and even wider range of applications and needs.

The Bosch Group is a leading global supplier of technology and services. In the areas of automotive and industrial technology, consumer goods, and building technology, some 280,000 associates generated sales of 45.1 billion euros in fiscal 2008. The Bosch Group comprises Robert Bosch GmbH and its more than 300 subsidiaries and regional companies in over 60 countries. If its sales and service partners are included, then Bosch is represented in roughly 150 countries. This worldwide development, manufacturing, and sales network is the foundation for further growth. Each year, Bosch spends more than 3.5 billion euros, or eight percent of its sales revenue, for research and development, and applies for over 3,000 patents worldwide. With all its products and services, Bosch enhances the quality of life by providing solutions which are both innovative and beneficial.
